Entrega Final – Construcción de un Ecosistema de Automatización IA

Alumna

Ilona Orona

Introducción

Este documento presenta el desarrollo de un ecosistema de automatización basado en Inteligencia Artificial construido utilizando Make, OpenAI, Notion y Gmail. El proyecto fue desarrollado con el objetivo de automatizar el análisis y clasificación de leads comerciales mediante un flujo completamente integrado.

Objetivo del proyecto

El objetivo de este proyecto fue diseñar e implementar un ecosistema de automatización utilizando Inteligencia Artificial para optimizar el proceso de clasificación de leads comerciales.

La solución desarrollada permite recibir automáticamente un nuevo lead registrado en una base de datos de Notion, analizar su información mediante un modelo de Inteligencia Artificial de OpenAI, clasificar el potencial comercial del lead, generar una justificación y una propuesta de acción comercial, almacenar dichos resultados nuevamente en Notion y notificar automáticamente al equipo mediante correo electrónico.

Con esta automatización se reduce significativamente el tiempo de análisis manual, se estandarizan los criterios de evaluación y se agiliza el proceso comercial.

Herramientas utilizadas

Durante el desarrollo del proyecto se utilizaron las siguientes plataformas:

- Make
- Notion
- OpenAI (GPT)
- Gmail

Cada una cumple una función específica dentro del flujo de automatización.

Descripción del flujo

El escenario comienza monitoreando una base de datos de Notion.

Cada vez que se crea un nuevo lead, Make detecta automáticamente el registro y obtiene toda su información.

Posteriormente, esos datos son enviados al modelo GPT de OpenAI mediante un prompt diseñado específicamente para realizar una evaluación comercial.

El modelo devuelve una respuesta estructurada en formato JSON con tres campos:

- Clasificación del lead
- Motivo de la clasificación
- Propuesta comercial sugerida

La respuesta es procesada mediante el módulo Parse JSON para separar cada uno de los campos y convertirlos en variables individuales.

Una vez procesada la información, el escenario actualiza el mismo registro de Notion incorporando:

- Clasificación IA
- Motivo IA
- Propuesta IA

Finalmente, el flujo envía automáticamente un correo electrónico notificando al responsable comercial sobre el nuevo lead analizado para facilitar la revisión humana.

Arquitectura del escenario

El flujo implementado quedó compuesto por los siguientes módulos:

1. Notion – Watch Data Source Items
2. OpenAI – Generate a Completion
3. JSON – Parse JSON
4. Notion – Update a Data Source Item
5. Gmail – Send an Email

Adicionalmente se incorporó un módulo Resume como estrategia de manejo de errores para evitar que el escenario completo se detenga ante un fallo puntual.

Prompt utilizado

Se diseñó un prompt específico para que el modelo actuara como analista comercial.

Su función consiste en evaluar la calidad del lead considerando información como:

- Empresa
- Cargo
- Necesidad
- Presupuesto
- Urgencia

La respuesta debía devolverse exclusivamente en formato JSON para facilitar su procesamiento automático.

El modelo genera:

- Clasificación (Alta, Media o Baja)
 - Motivo
 - Propuesta
-

Manejo de errores

Como parte del proyecto se implementó una estrategia de tolerancia a errores utilizando la funcionalidad Resume de Make.

Este mecanismo permite que, si alguno de los módulos presenta un inconveniente temporal, el escenario no se interrumpa completamente y pueda continuar su ejecución cuando sea posible.

Además, durante el desarrollo se realizaron múltiples pruebas para validar distintos escenarios y garantizar la estabilidad del flujo.

Pruebas realizadas

Se ejecutaron distintas pruebas utilizando diferentes tipos de leads.

Entre ellas:

- Leads con información completa.
- Leads con información incompleta.
- Leads con distintos niveles de potencial comercial.

En todos los casos el sistema logró:

- Detectar automáticamente el nuevo registro.
 - Analizar la información mediante IA.
 - Generar la clasificación correspondiente.
 - Actualizar la base de datos de Notion.
 - Enviar la notificación por correo electrónico.
-

Beneficios obtenidos

La automatización desarrollada aporta múltiples beneficios:

- Reduce el tiempo dedicado al análisis manual.
 - Estandariza el proceso de clasificación de leads.
 - Disminuye errores humanos.
 - Centraliza toda la información dentro de Notion.
 - Agiliza la toma de decisiones comerciales.
 - Permite escalar el proceso sin aumentar el trabajo operativo.
-

Aprendizajes

Durante el desarrollo del proyecto fue necesario integrar distintas plataformas y resolver desafíos relacionados con:

- Consumo de APIs.
- Formato JSON.
- Diseño de prompts para IA.
- Mapeo de variables entre módulos.
- Procesamiento de respuestas estructuradas.
- Manejo de errores.
- Automatización de procesos mediante Make.

Estos aprendizajes permitieron comprender cómo construir soluciones completas que integran Inteligencia Artificial con herramientas de productividad empresarial.

Conclusión

El proyecto logró cumplir el objetivo propuesto mediante la construcción de un ecosistema de automatización completamente funcional.

La solución integra Notion, OpenAI, Make y Gmail para automatizar el análisis de leads comerciales, reducir tareas repetitivas y mejorar la eficiencia del proceso de calificación.

La implementación demuestra cómo la Inteligencia Artificial puede incorporarse a procesos de negocio reales para generar valor, optimizar tiempos de respuesta y asistir en la toma de decisiones comerciales.

El resultado final es una automatización escalable, reutilizable y fácilmente adaptable a futuros requerimientos del negocio.

Capturas

Figura 1. Escenario completo de automatización desarrollado en Make. *La figura presenta la arquitectura completa del escenario implementado en Make, donde se integran Notion, OpenAI, JSON y Gmail para automatizar el procesamiento y clasificación de leads comerciales.*

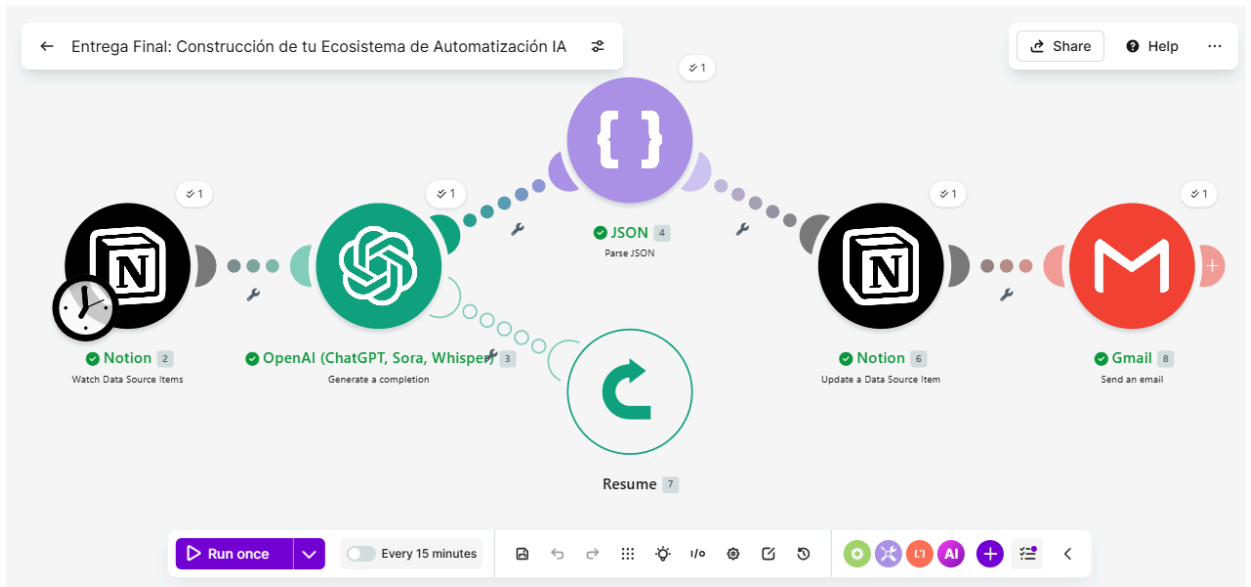

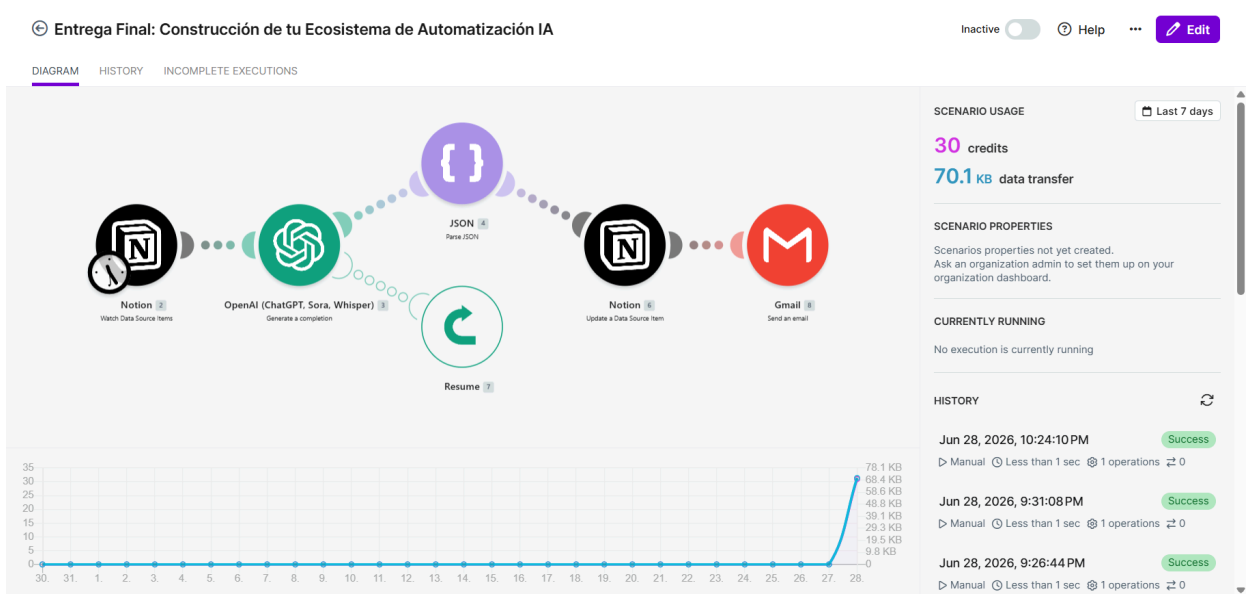

Figura 2. Ejecución exitosa del escenario. *La figura muestra una ejecución exitosa del escenario, evidenciando el correcto funcionamiento de todos los módulos y la comunicación entre las distintas herramientas integradas.*

Sos un Analista Comercial Senior especializado en clasificación de leads B2B.

Tu tarea es analizar cada lead y devolver EXCLUSIVAMENTE un objeto JSON válido.

Evaluá el lead considerando:

- Presupuesto disponible.
- Cargo del contacto.
- Nivel de urgencia.
- Tipo de necesidad.
- Potencial comercial.

Clasificá el lead en una de estas categorías:

- VIP

Text content of the message on behalf of the selected **Role**.

[+ Add message](#)

For examples, see the [OpenAI Prompt examples](#).

> Max Output Tokens

Maximum number of tokens to use in the completion (output). If **empty**, the limit of the model will be used.

Note that:

- Low values may cause the output to be truncated.
- High values may use a lot of OpenAI credit.

When using reasoning models such as the o1 models, this value is the sum of reasoning + output tokens.

For details, check [OpenAI Pricing](#) page and the [Reasoning Models Guide](#) if relevant.

Aprobación requerida - Nuevo Lead IA

Se procesó un nuevo lead.

Lead: Franco Alberdi

Empresa: Hermanos Alonso S.R.L.

Clasificación IA:

Baja

Motivo:

El lead no incluye información clave sobre empresa, cargo, necesidad, presupuesto ni urgencia, por lo que no es posible validar potencial comercial ni capacidad de decisión.

Propuesta:

Solicitar datos básicos de contacto, empresa, cargo, necesidad específica, presupuesto estimado y plazo de implementación antes de avanzar con una propuesta comercial personalizada.

Si la propuesta es correcta, cambiá el Estado del registro en Notion a "Aprobado por Humano".
